OVERVIEW

This document demonstrates the UIT Typst Report Template. The system labels (table of contents title, chapter prefix, figure supplements, etc.) adapt automatically to the active `lang` setting.

1.1. Key Features

The template provides four document classes: **article**, **report**, **book**, and **thesis**. Each class ships with sensible defaults for font size, margins, and two-sided printing.

Note

This sample was generated automatically. Inspect the `samples/` directory for the entry-point `.typ` file for each language.

1.2. Sample Table

#	Feature	Status
1	Multilingual labels (en, vi, ms, zh-Hant, zh-Hans)	✓
2	Document classes (article / report / book / thesis)	✓
3	Digital and print output profiles	✓
4	BCP 47 language pack structure	✓
5	Per-language sample PDFs	✓

Table 1: Template Feature Overview

1.3. Sample Code

```
1 #show: document.with(  
2   doc-class: "report",  
3   lang: "vi-vn",  
4   output: "digital",  
5   ..data,  
6 )
```

Code 1: Minimal Document Setup

CONFIGURATION REFERENCE

The `document()` function accepts the following top-level parameters:

- `doc-class` — `"article"` | `"report"` | `"book"` | `"thesis"`
- `lang` — BCP 47 language code, e.g. `"en-us"`, `"vi-vn"`, `"zh-hant"`
- `output` — `"digital"` | `"print"`
- `paper` — `"a4"` | `"a5"` | `"letter"`
- `font-size` — any Typst length, e.g. `11pt`
- `components` — dictionary of boolean flags to override class defaults
